

Vineet Jindal

Engineer by training. Product builder by practice.

DTU Mathematics & Computing graduate with 3+ years at Samsung R&D; across Android systems and on-device AI. I use that technical foundation to understand user problems, define products, test assumptions and build AI-enabled experiences.

3+ yrs

Samsung R&D;

1,000+

Heating VOCs analyzed

200+

Reset/system VOCs

7 games

AI GIF ownership

WHAT I BRING

Technical depth + product judgment

Product Discovery

User conversations, problem framing, market/competitor research, hypotheses and MVP definition.

AI / ML

On-device AI, TensorFlow Lite, quantization, pruning, LRCN, image processing and AI prototyping.

Execution

PRDs, workflows, prioritization, trade-offs, validation planning and cross-functional thinking.

Systems

Android/ADB, root-cause analysis, thermal/reset behavior, reliability and workflow automation.

Marketplace

Supply-demand research, pricing/payout economics, positioning and hyperlocal GTM validation.

Technical

Python, C, C++, JavaScript, Node.js, Express.js, MongoDB, MySQL and Git.

CURRENT TARGET

AI Product Manager / Product Manager roles where technical feasibility, customer understanding and AI product execution meet.

Public-safe portfolio: Samsung summaries intentionally exclude confidential code, datasets and internal implementation details.

Android Sanity Automation

Samsung R&D; | Python + ADB | System performance | Workflow automation

SAMSUNG · AUTOMATION

From manual checks to an automated validation pipeline

Internship initiative

PROBLEM	Engineers manually connected devices, ran ADB/grep commands, exercised apps, collected CPU/memory/performance/thermal parameters across Android versions, and populated comparison spreadsheets.
APPROACH	Proposed and built a Python/ADB workflow that automated device actions, parameter collection, cross-version comparison and multi-sheet Excel report generation with anomaly highlighting.
PRODUCT LENS	Started from repetitive user pain inside the engineering workflow, defined the useful output, automated the highest-friction steps, and made deviations easy to inspect.

Outcome: Replaced a tedious manual device-to-report process with an automated workflow.

AI GIF Event Detection

Samsung R&D; | LRCN | TFLite | Dataset creation | Android integration

SAMSUNG · ON-DEVICE AI

Turning gameplay moments into on-device highlights

Part of a six-member team

PROBLEM	Detect meaningful gaming events such as kills, level completion or match outcomes and preserve the relevant moments as GIF highlights.
ROLE	Owned seven games in the workstream: gameplay recording, frame extraction/labeling, LRCN-based model training, TFLite conversion and Android integration/testing.
ITERATION	Investigated capture failures, refined event logic and supported QA feedback loops across different game behaviors.
PRODUCT LENS	Translated different user/game experiences into event definitions while balancing model quality with mobile deployment constraints.

Outcome: Supported India and Korea QA toward commercial launch.

SnapAI: From Smart Capture to Marketplace

PRD | User discovery | Market research | MVP | AI workflow | GTM validation

SNAPAI · PRODUCT DISCOVERY

A product pivot driven by real user constraints

Independent hands-on product project

PROBLEM	For small events, trips and everyday moments, someone often stays behind the camera; professional photography can feel expensive or cumbersome for short, spontaneous needs.
V1	Started with an unattended AI Smart Capture concept: place a phone on a stand, automatically capture important moments, then curate/edit the album.
DISCOVERY	User conversations exposed a core limitation: real events move. Occlusion, changing angles and unpredictable moments make fixed unattended capture unreliable.
PIVOT	Reframed SnapAI as an on-demand capture marketplace: a human captures the moment while AI supports quality, culling, editing, curation and delivery.
PM WORK	Completed PRD work; conducting customer and photographer discovery, competitor/market research, pricing and supply-economics analysis, MVP design and real-world validation.

Outcome: Early AI culling/editing workflow tested on ~120 photos; current focus is willingness-to-pay and supply validation.

WHAT THIS PROJECT DEMONSTRATES

Discovery	Starting from the user problem instead of defending the first solution.
Product judgment	Recognizing when a technical solution is not reliable enough for the real-world job-to-be-done.
Marketplace thinking	Treating supply availability, travel, payout and customer price as core product constraints.
AI judgment	Using AI where it improves capture quality, culling/editing and delivery rather than forcing full automation.

Developer productivity & innovation

AI CL Analyzer

Contributed to a tool concept for code-change/wiki summarization and build checking, targeting time lost in understanding changes and repeated build failures.

Delta Merge Tool

Built automation to verify model-specific code across Android-version paths, reducing repetitive migration verification.

Profile Pilot

Proposed a privacy/multi-user profile concept using user detection to create context-specific phone experiences; selected by the HOD for further senior-level review.

EXPERIENCE & EVIDENCE

A technical base with growing product ownership

2024-2026	Software Development Engineer, Samsung R&D; Institute India - Noida Android heating/reset analysis, on-device AI, AI feature development, developer tooling and customer VOC diagnosis.
2023-2024	Software Engineering Intern, Samsung R&D; Institute India - Noida Android sanity automation; Android platform fundamentals; Professional-level DSA assessment; DTU batch representative/mentor.
2026-Present	SnapAI - Founder & Product Builder PRD, customer/supply discovery, competitor research, MVP workflow, AI culling/editing, pricing/economics and GTM validation.

EDUCATION & RECOGNITION

Delhi Technological University - B.Tech, Mathematics & Computing, 2023 | CGPA 8.51

Samsung Professional-level DSA assessment - Rs. 50,000 incentive | Two Samsung internal recognitions including Employee of the Month / Spot recognition

LeetCode all-time best rank 11,741 | HackerBlocks rank 2,452 / 56,400 | JEE Advanced AIR 11,680

Open to AI Product / Product opportunities
